# Deprecations

## PowerBI Scorecards

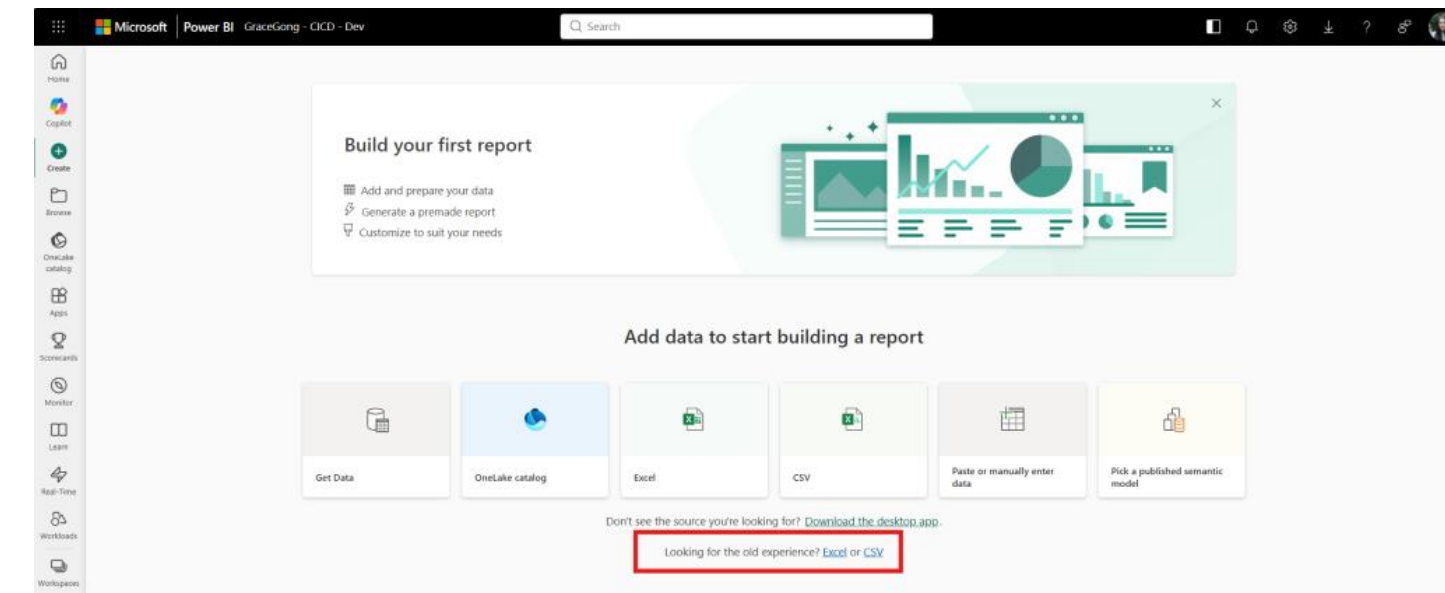

- The hierarchies feature in the PowerBI scorecards will be removed (15 April 2026)
- Heatmap view that was tied to the hierarchies will also be discontinued
- **The scorecards will still work as usual**

## Legacy import Excel & CSV experience in PowerBI Service

- Applies to users who created reports using the old experience to import an Excel or CSV file from the Create page in the service.
- No impact for users who created semantic models in PowerBI Desktop
- Reports created from legacy experience must be recreated to continue updating

## Old File Picker experience in Power BI Desktop

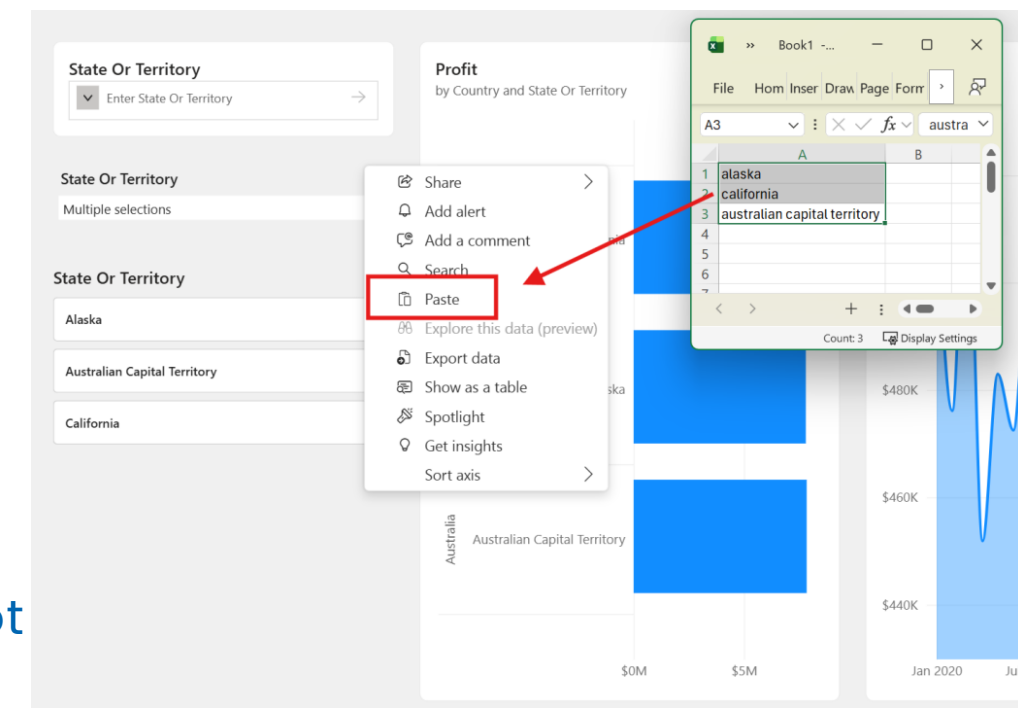

- From April 2026 users will no longer be able to access the old file picker experience.
- **This will be the default experience in Power BI Desktop**

# Announcements

## Input Slicer updates

- The Text slicer has been renamed Input slicer
- Users can choose from: Contains any, Contains all, Does not contain any, Starts with any, Does not
- Input slicer can also be configured for user input with Translytical Task Flows
- Input slicer now support conditional formatting (Fx) across multiple visual elements in the formatting pane

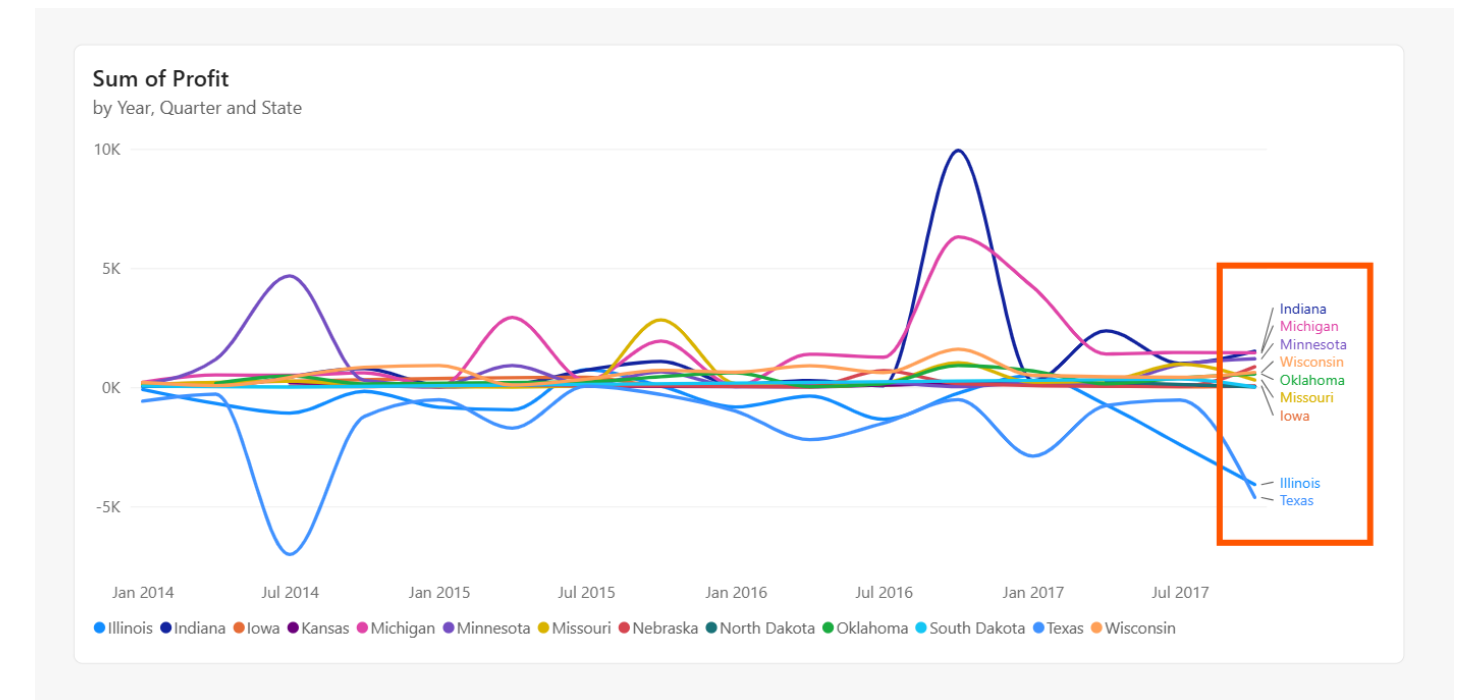

## Paste selections

- The paste context menu feature on the slicer visual lets you apply multiple selections by pasting a list of values
- Already available on the Button and List Slicers.
- Pasting selections into slicer enhances filtering process

## Series label leader lines for line charts

- Leader lines visually connect each series label to its corresponding data point, which improves readability

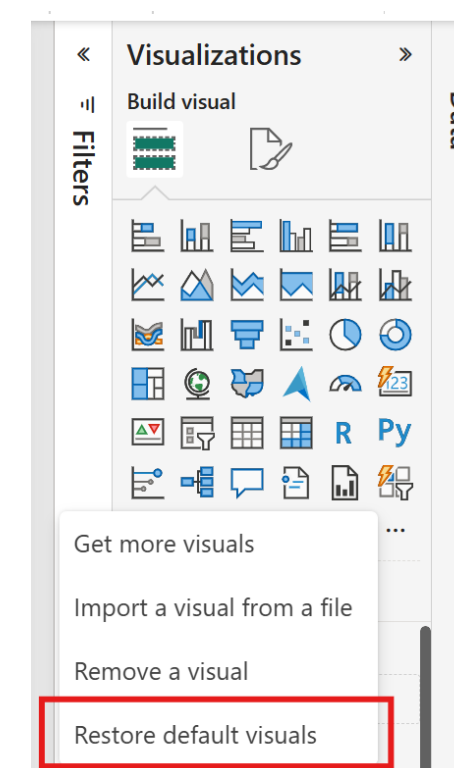

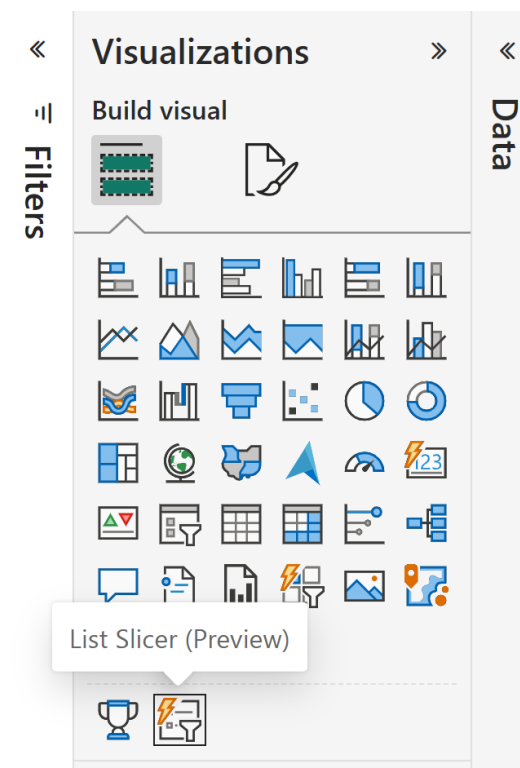

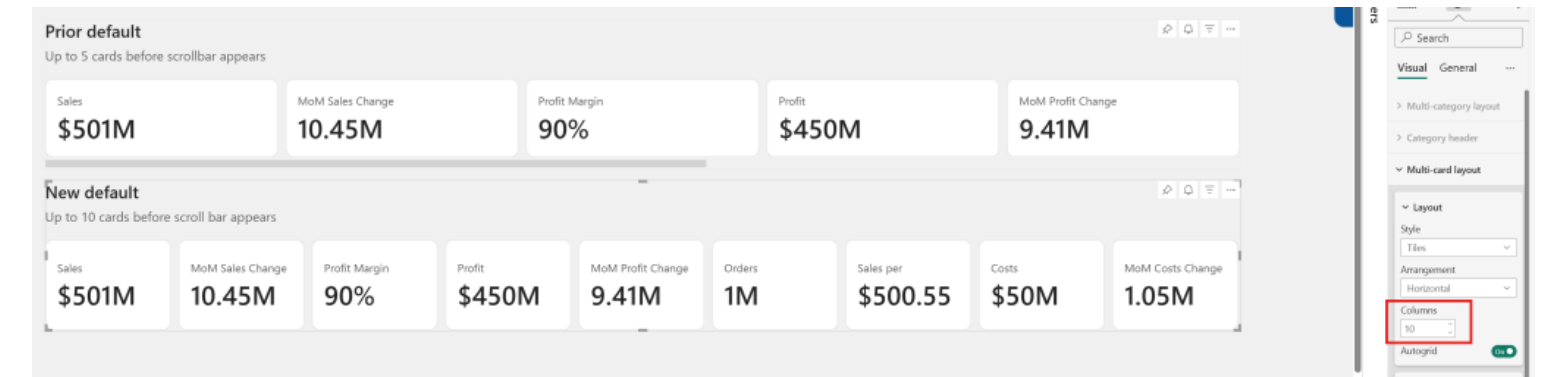

# Announcements

## Card Visual updates

- Default for horizontal callouts was increased from 5 to 10
- When using Categories in the Card visual, selecting a category name will filter other visuals on the page.
  - The filter can be removed by selecting somewhere else on the card to deselect it

## Preview visuals update

- Preview visuals now display “*Preview*” after their names
- Preview visuals appear below Divider with Custom and other unpinned visuals
- Reset visuals to default settings by selecting “*restore default visuals*”

# Announcements- CoPilot

## CoPilot & AI

- The character input limit has been increased from 500 to 10k characters in all Copilot surfaces
- This will allow you to copy/ paste longer prompts to Copilot to meet your needs
- This applies to all Copilot surfaces including Standalone, Report pane, Apps. Mobile or Embedded

## CoPilot pane user experience update

- The Copilot pane in Reports and Apps have been updated to match the standalone experience, resulting in the same look & feel
- **Functionally the pane operates the same as before with the same capabilities**

## CoPilot feedback update

- Updated feedback dialog that now allows you to add diagnostics with your submission.

# Announcements

## AI Narrative auto refresh

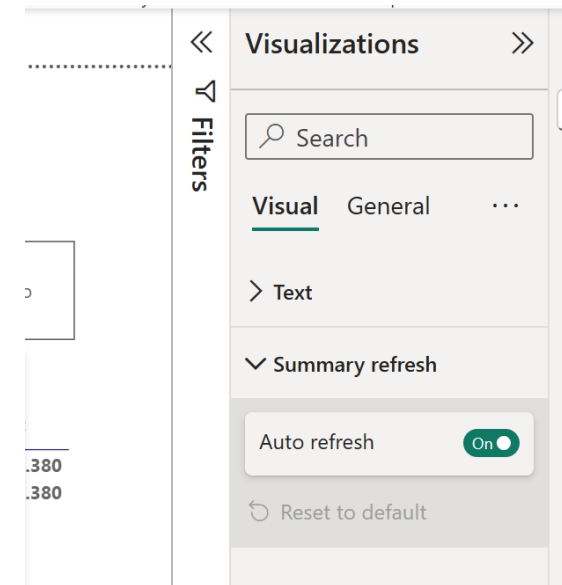

- Use the Auto refresh toggle in the visualizations pane in order for the summary to update automatically whenever a slicer selection changes, resulting in a smoother and more efficient reporting experience

## Translytical task flows

- Now Generally Available
- **Allows you to perform actions directly within Power BI reports such as updating records, adding data, initiate workflows in other systems without navigating away from the report**

## Direct Lake in OneLake

- Now Generally Available

## Announcements

### Improved error dialogs in PowerBI Desktop

- Additional details for errors in visuals in PowerBI Desktop has been added

### Azure Maps visual updates

- Performance on the Azure maps with pie charts have been improved.
- Faster rendering from February 2026

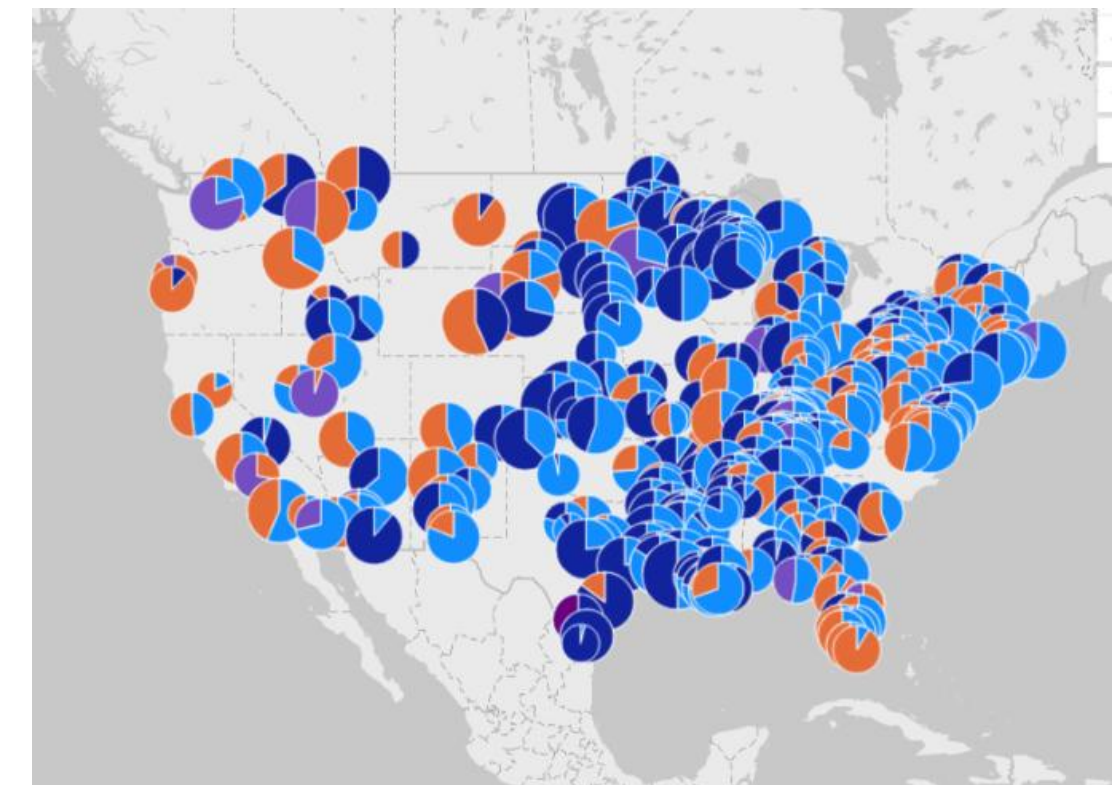

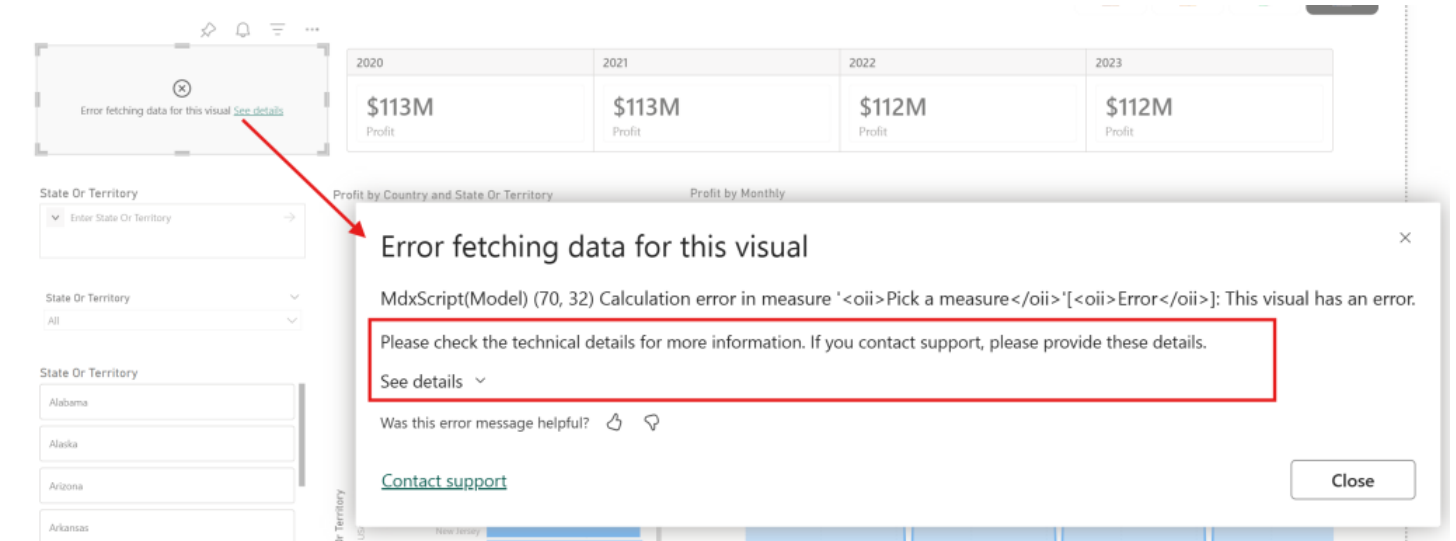

### New DAX Functions

- Two new functions: TABLEOF and NAMEOF have been introduced
- Reference model objects that auto-adapt to renames and work inside UDF's

### New DAX UDF Functions

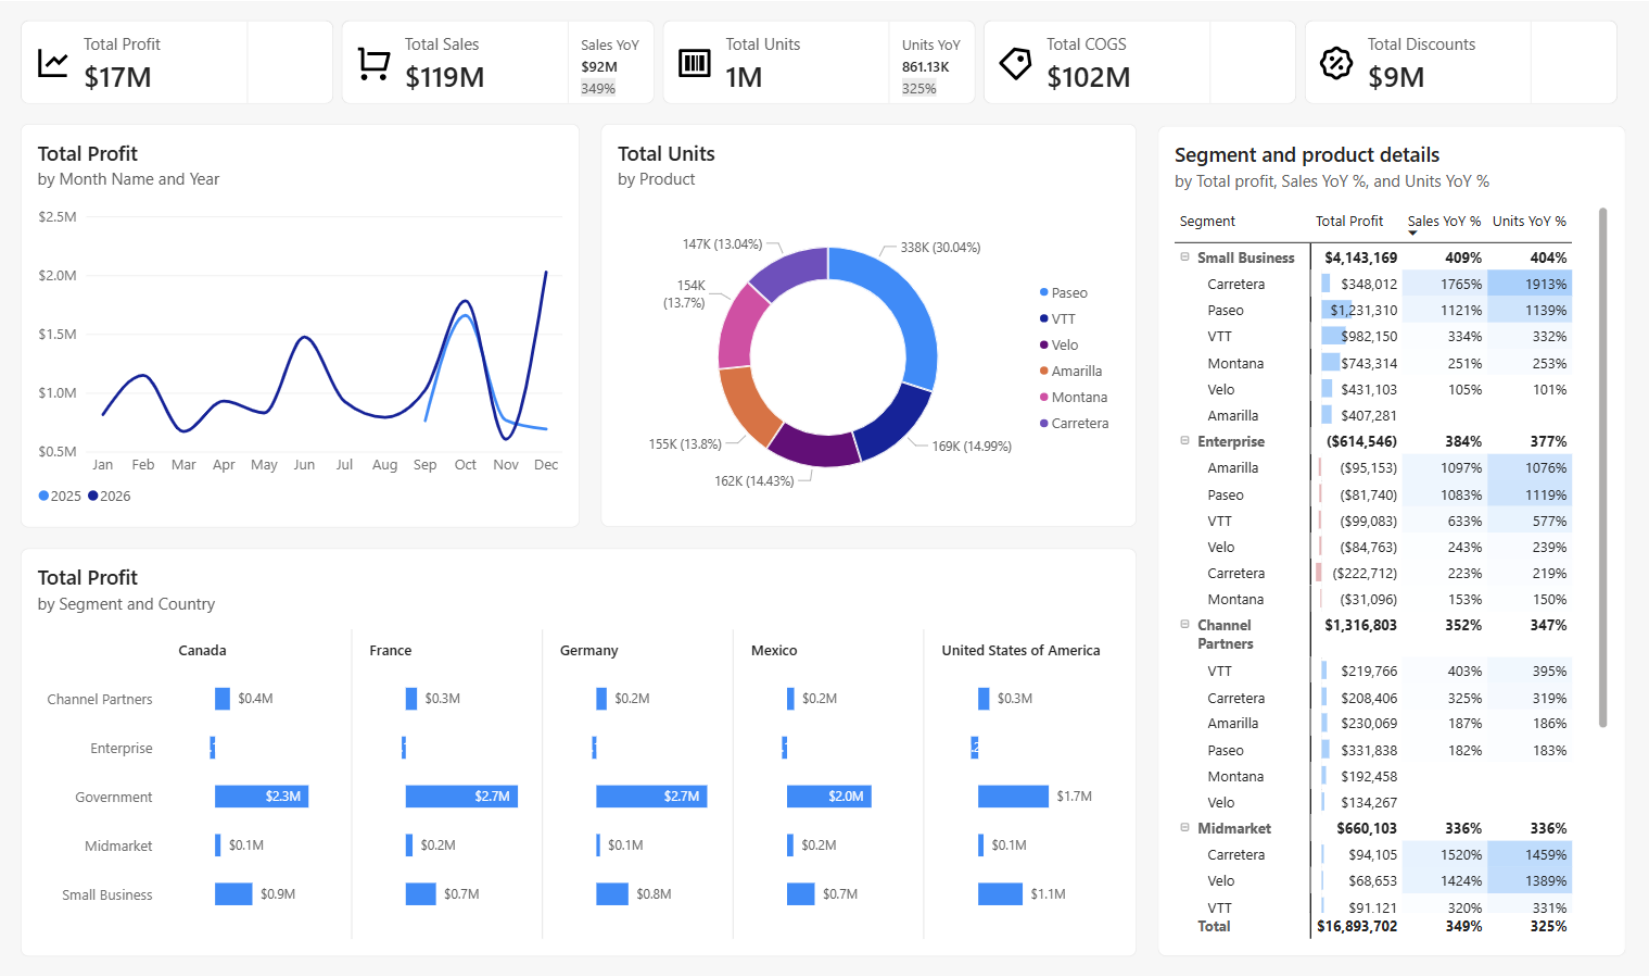

- A new function INFO.USERDEFINEDFUNCTIONS() have been introduced
- Returns information about all your UDF's in your model

# Announcements

Modern visual defaults and customizing theme improvements (preview)

- Starts with a modern look.
- Updated base theme aligned featuring subtitles, uniform padding, style presets, grey canvas background (1080\*1920px) by default
- Charts display with smooth lines, slicers default to dropdown mode and buttons have a refreshed appearance without manual formatting.

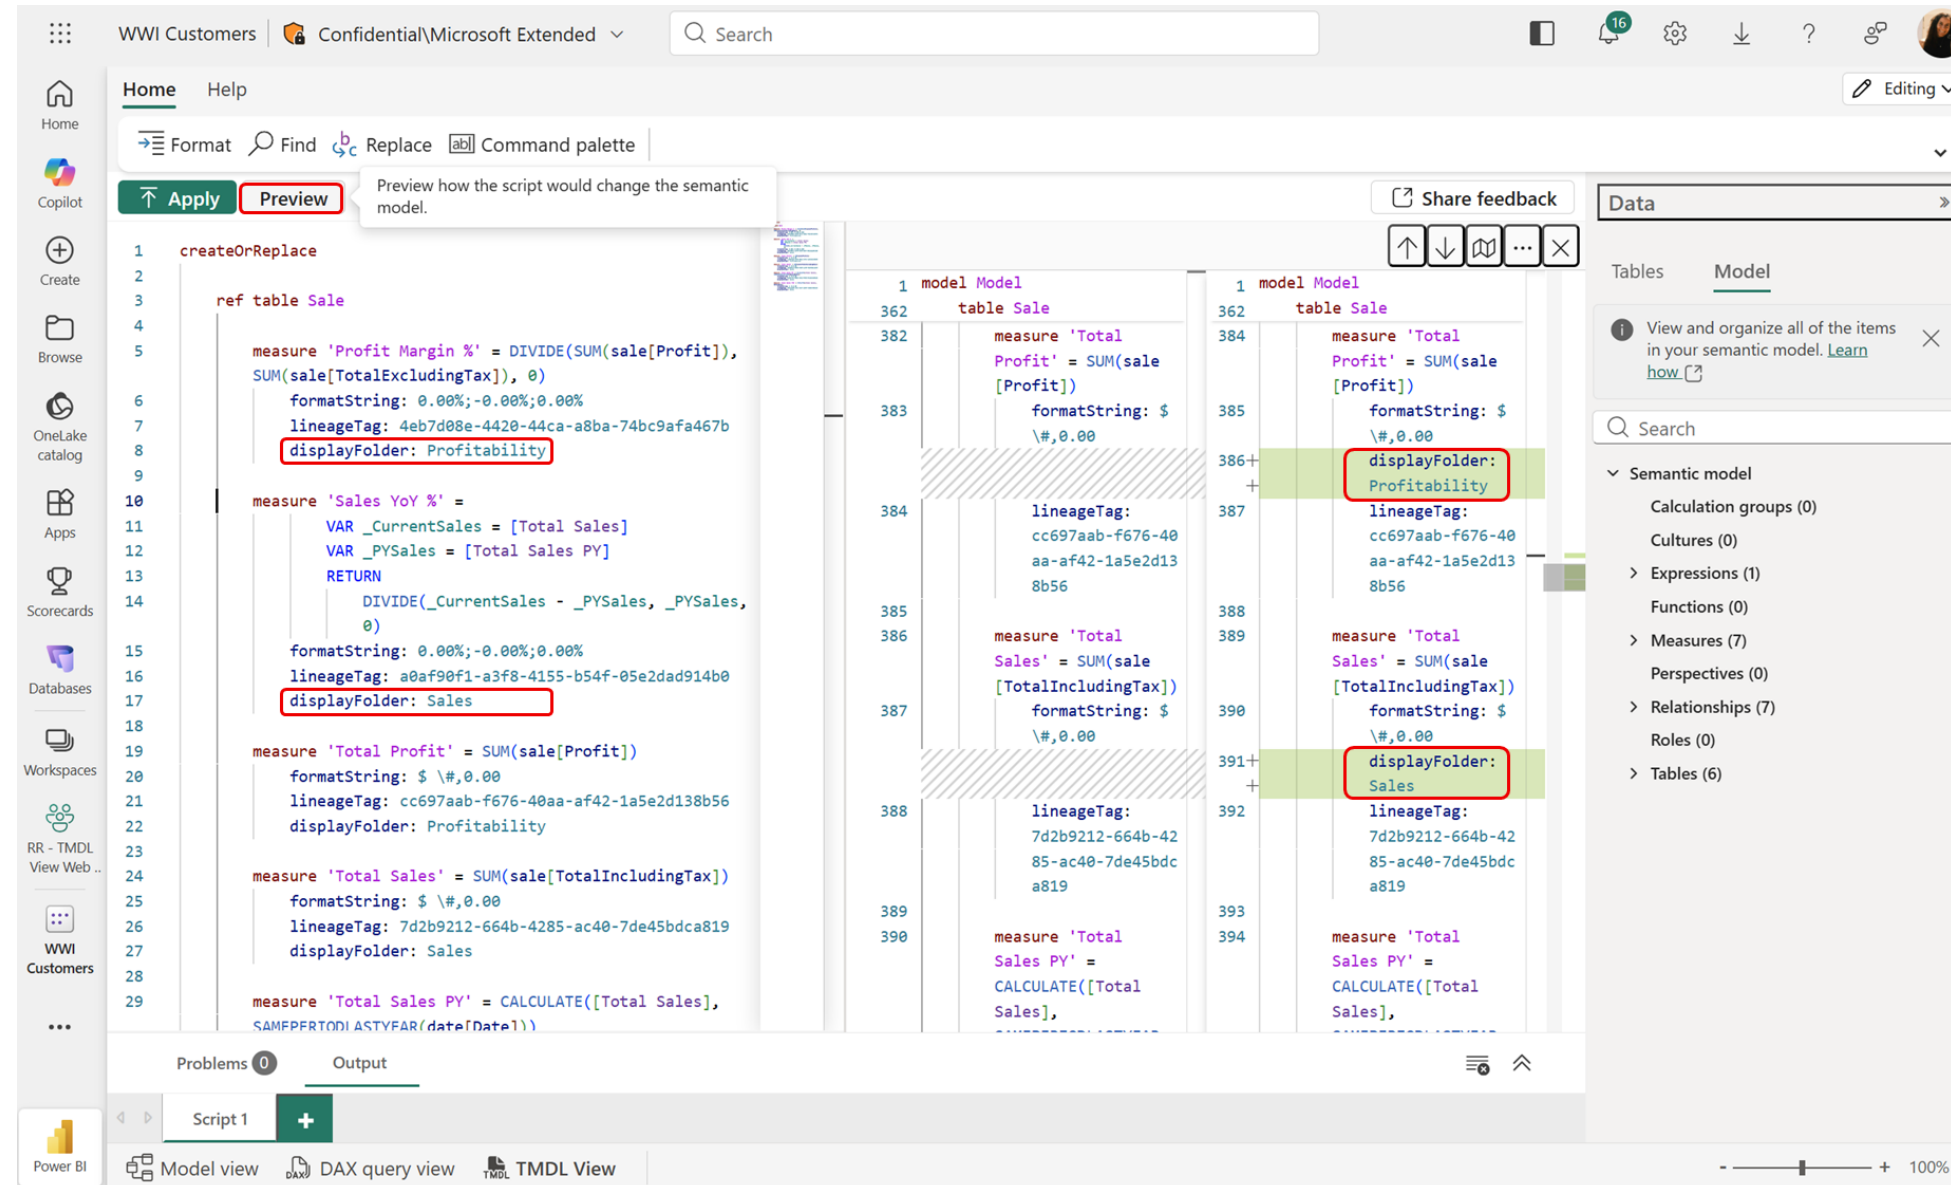

# Announcements

## TMDL view in web modelling (Preview)

- Introduces a new code-first semantic modelling experience directly in the browser
- With this preview, developers can script, modify, and apply changes to model objects directly in a code editor using TMDL without switching to Desktop or downloading model files.
