Early registration using code MSCATL gives an additional \$200 discount with current Super Early Bird Pricing

Announcements

Collaboration on Sensitive Data in PowerBI Desktop

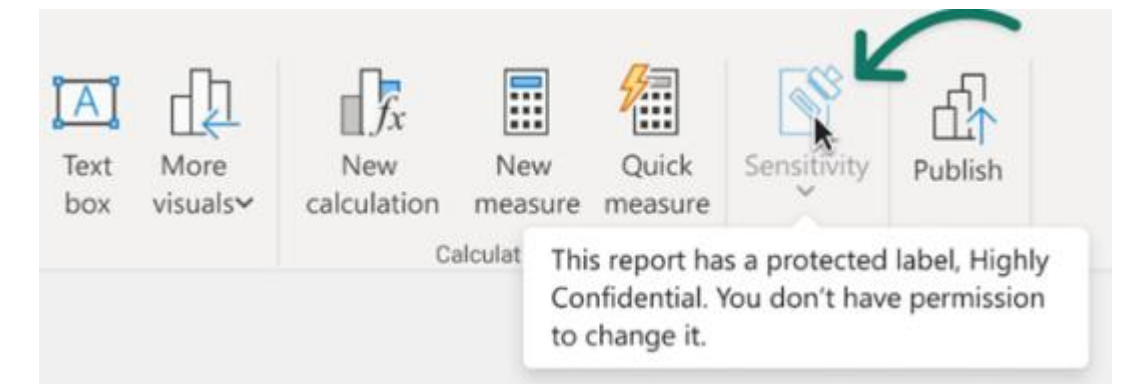

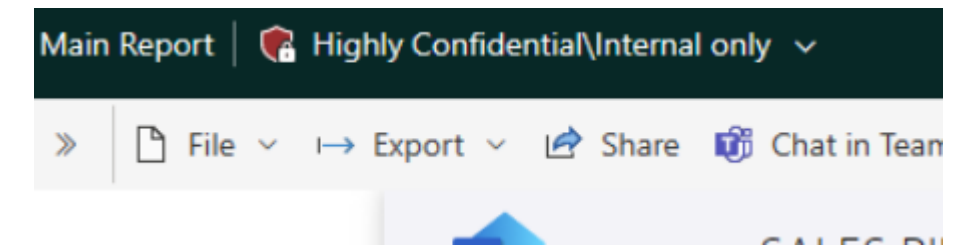

Setup sensitivity labels to classify PowerBI Files: *Confidential* or *Internal use*

Benefits of sensitivity labels once applied

- Comply with organizational policies by classifying data
- Enable sensitivity label continuity feedback to PowerBI service and Fabric
- Encrypt the file according to your Organizations requirements

Certain restrictions still applies

For more detailed information refer to this months update

Announcements

Visual Calculations Update

- Create visual calculations faster with parameter pickers
 - Easier and faster to write visual calculations thanks to the parameter pickers
- Visual calculations are more resilient to changes in the visual
 - If you previously created a visual calculation with an axis reference, such as COLUMNS, and then changed visual types resulting in the absence of COLUMNS, the visual calculation would produce an error and the visual would return an error.
 - A reference to a non-existent axis is permissible and will be ignored
- Easily create calculations in Explore

1 Look up a value with context = LOOKUP([Field], [Column], SearchValue)

Category	Sales Amount	Calculation
Accessories	\$1,272,057.89	
Bikes	\$94,620,526.21	
Clothing	\$2,117,613.45	
Components	\$11,799,076.66	
Total	\$109,809,274.20	

[Category]
[Sales Amount]

1 Empty axis reference = RUNNINGSUM([Sales Amount], COLUMNS)

Category	Sales Amount	Empty axis reference
Accessories	\$1,272,057.89	1,272,057.89
Bikes	\$94,620,526.21	94,620,526.21
Clothing	\$2,117,613.45	2,117,613.45
Components	\$11,799,076.66	11,799,076.66
Total	\$109,809,274.20	109,809,274.20

1 Running sum = RUNNINGSUM([Sum of Sales Amount])

Fiscal Year	Sum of Sales Amount	Calculation
FY2018	\$23,860,891.17	
FY2019	\$34,070,108.50	
FY2020	\$51,878,274.54	
Total	\$109,809,274.20	

Announcements

Sparklines

Generally available (it has been in preview since December 2021)

- Working with both sparklines and calculation groups, you can now decide how the calculation group is applied to the sparkline
 - You can choose between 'Individual values' (default) or 'Entire sparkline'.

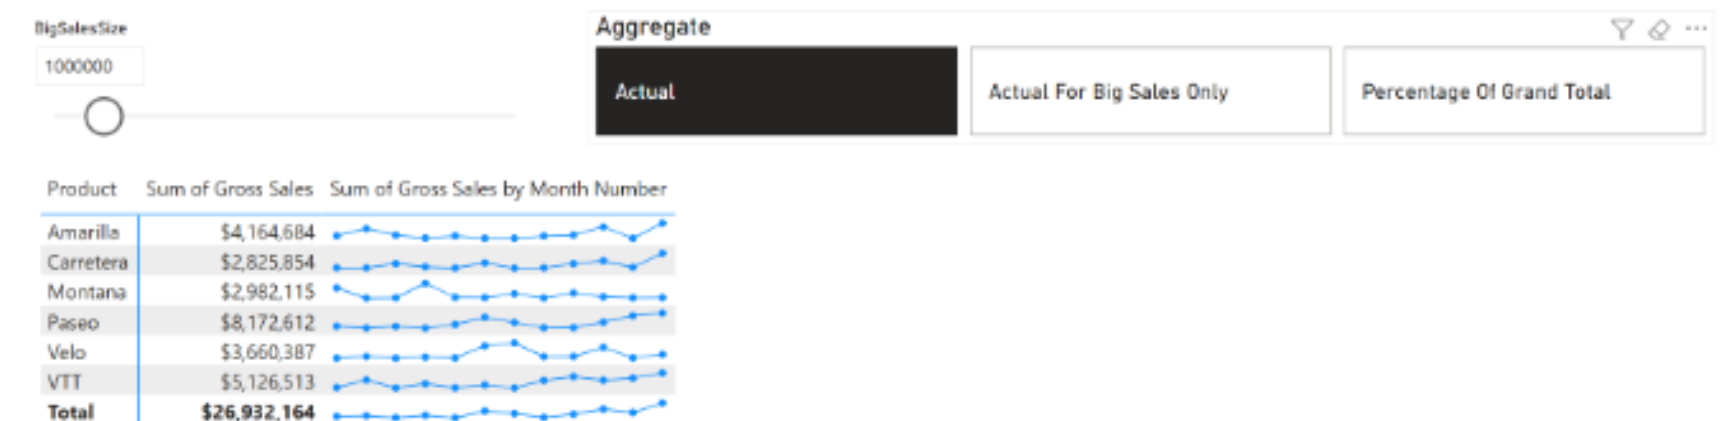

Azure Maps

- New tenant settings
- Support for mapping South Korea locations

External tools write operations

- Use external tools for any write operation on your semantic model.

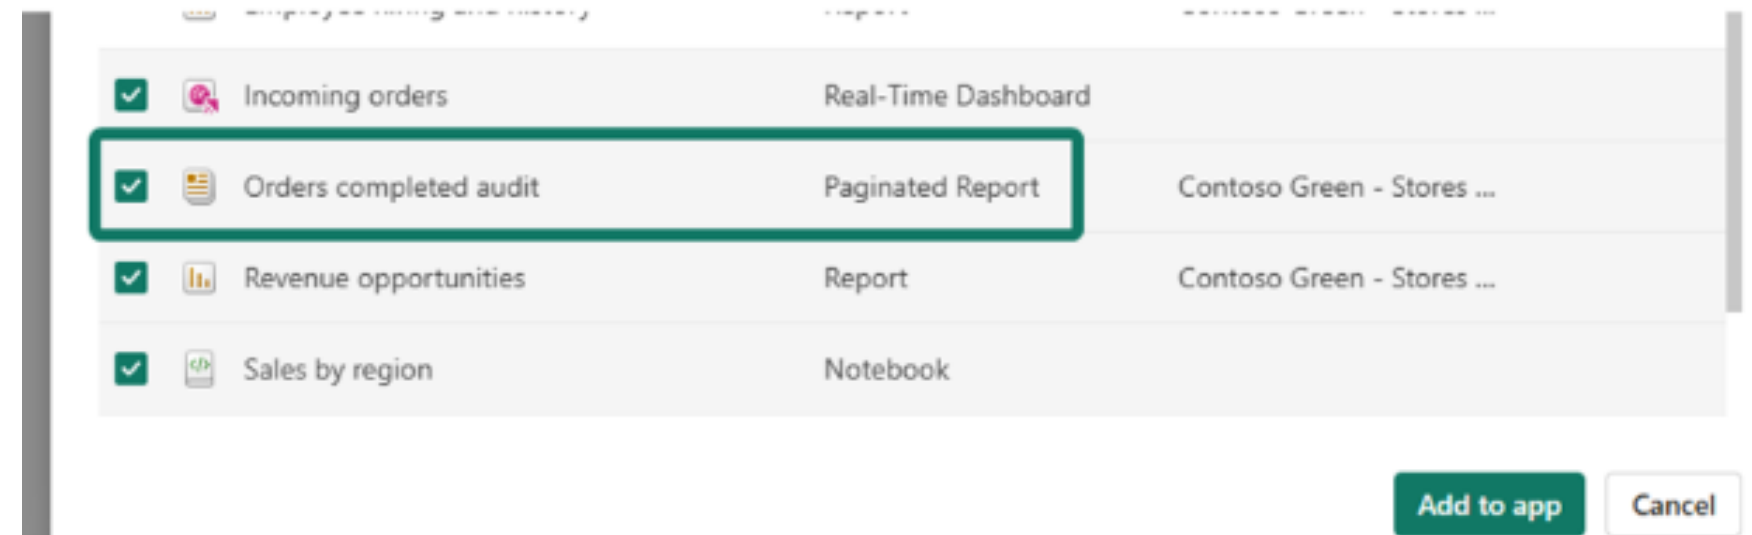

Announcements

Support for adding paginated reports to org apps

Include paginated report items in your organizational applications

Unlike workspace apps and unique to org apps (preview), the org app will propagate access to the paginated report **and** the underlying semantic model that informs the paginated report.

Your org app consumers can then view the paginated report from the org app.

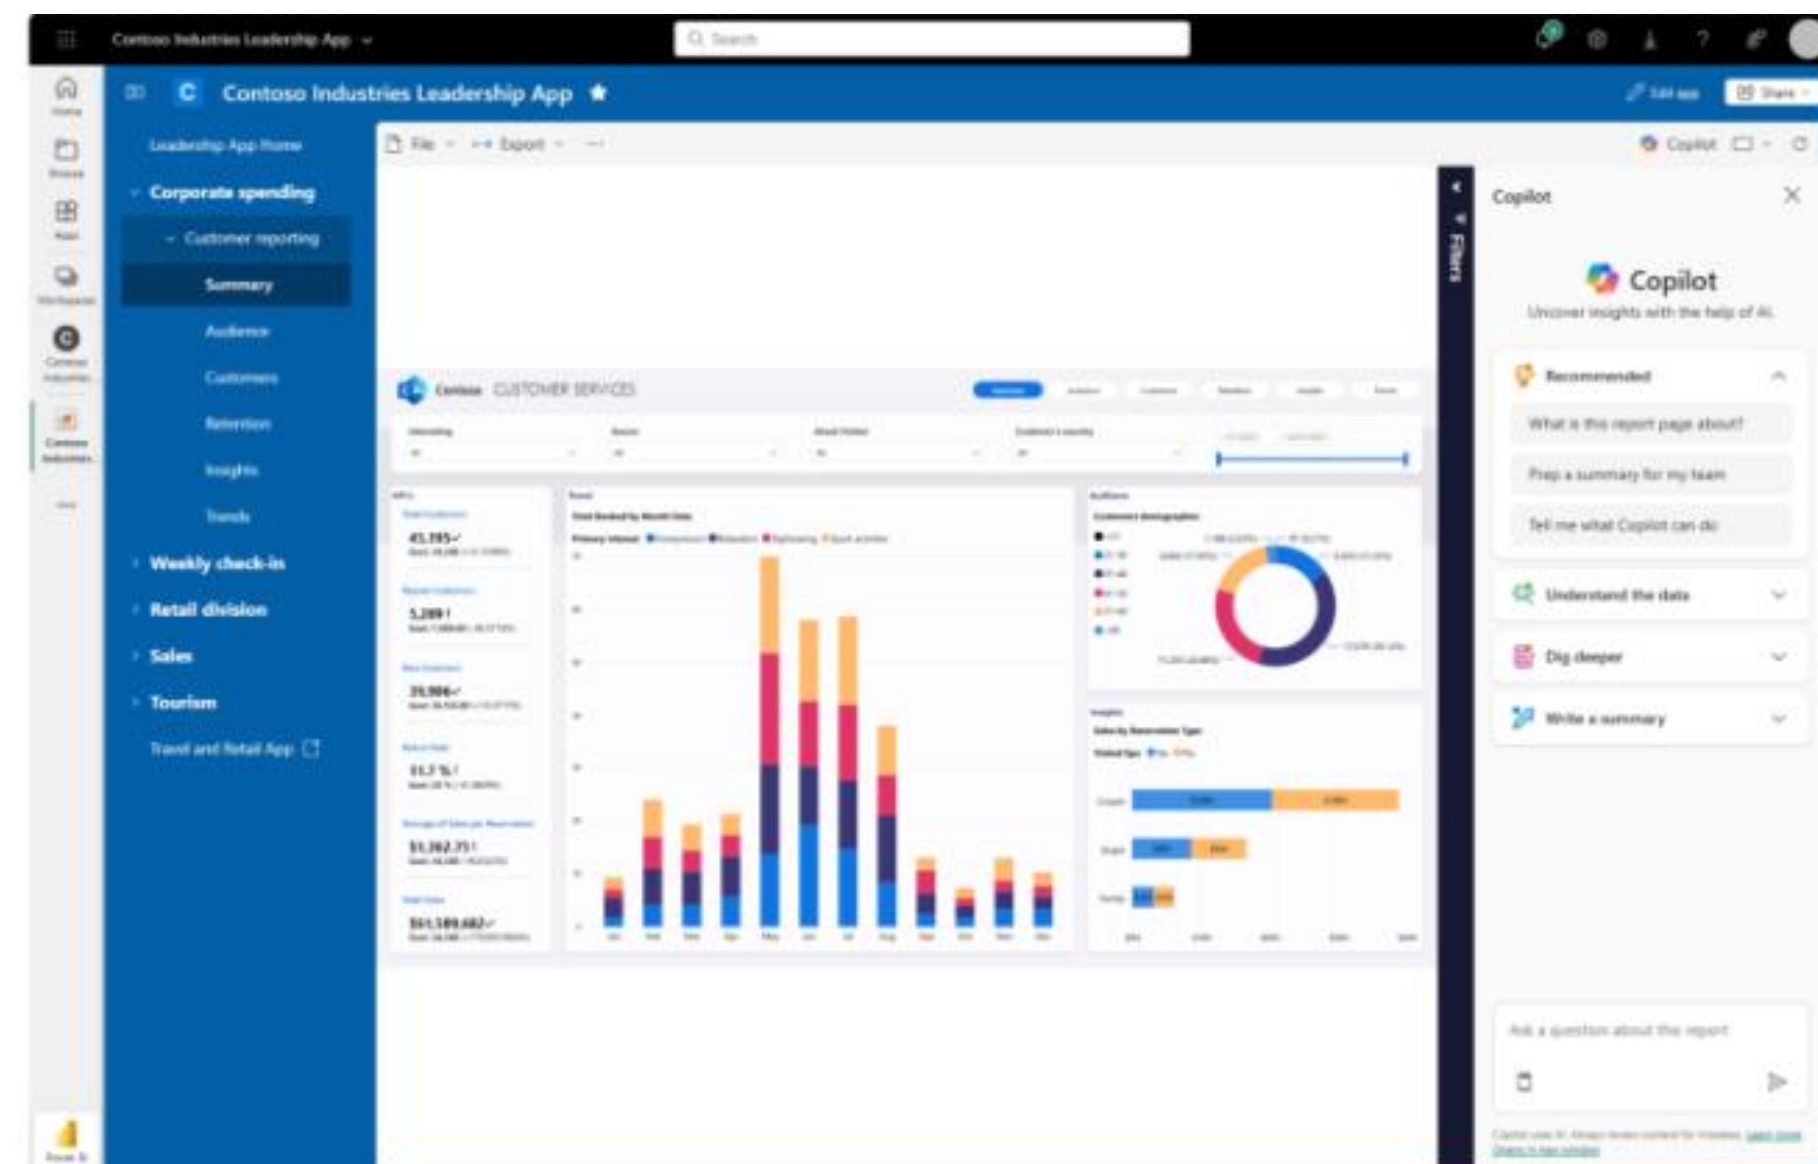

Announcements

Use Copilot on reports in org apps.

In organizations where Copilot is enabled and licensed for use, the same Copilot available on reports viewed in workspace apps is now available for use on reports in org apps.

From the Copilot pane you can understand what a report is about with summaries or get insights faster with questions about your data.

Announcements

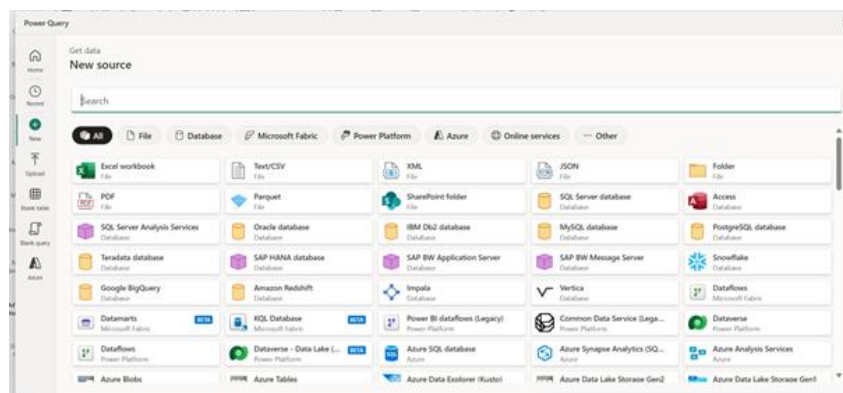

Power Query editing in the web for Import models

Get data, transform data, and refresh your import models entirely on the web, with no need for Desktop.

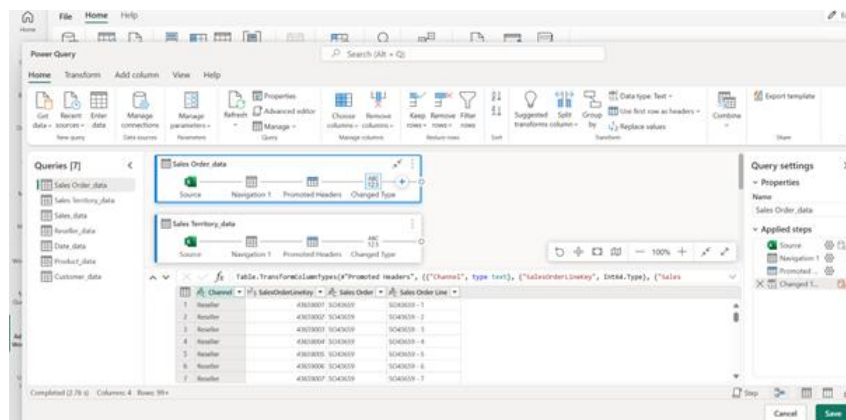

Get Data

Add new import tables to your semantic models directly on the web using the familiar Power Query 'Get Data' experience

Transform Data

Select "**Transform data**" from the Home' tab of the ribbon to launch the rich, modern Power Query user interface.

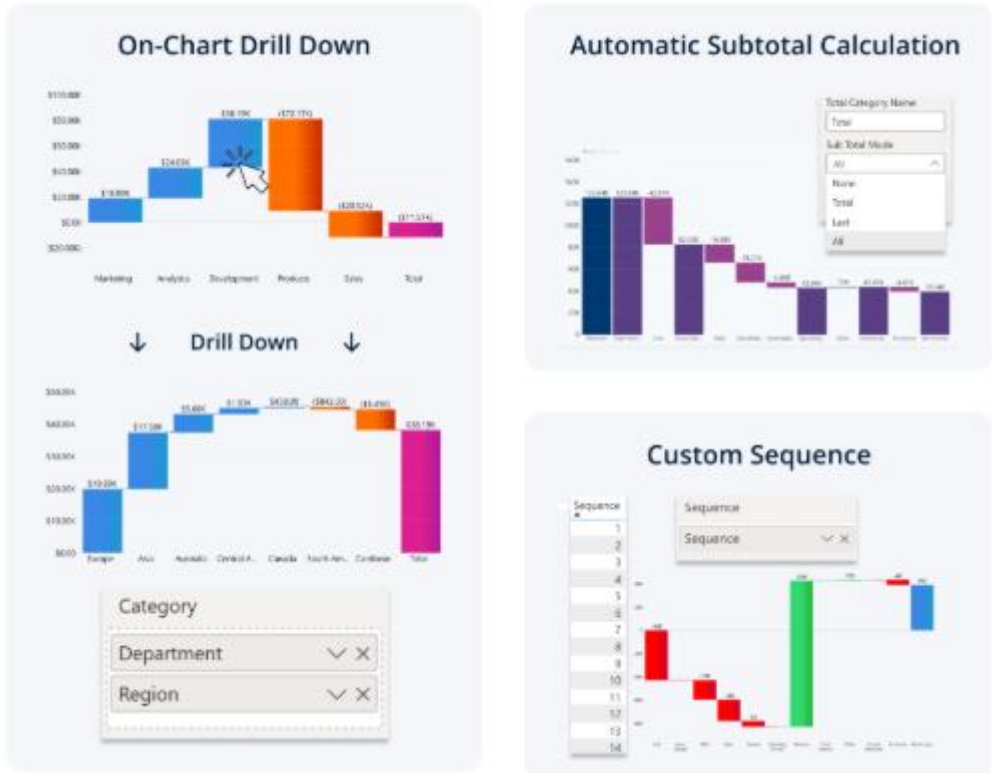

Refresh Data

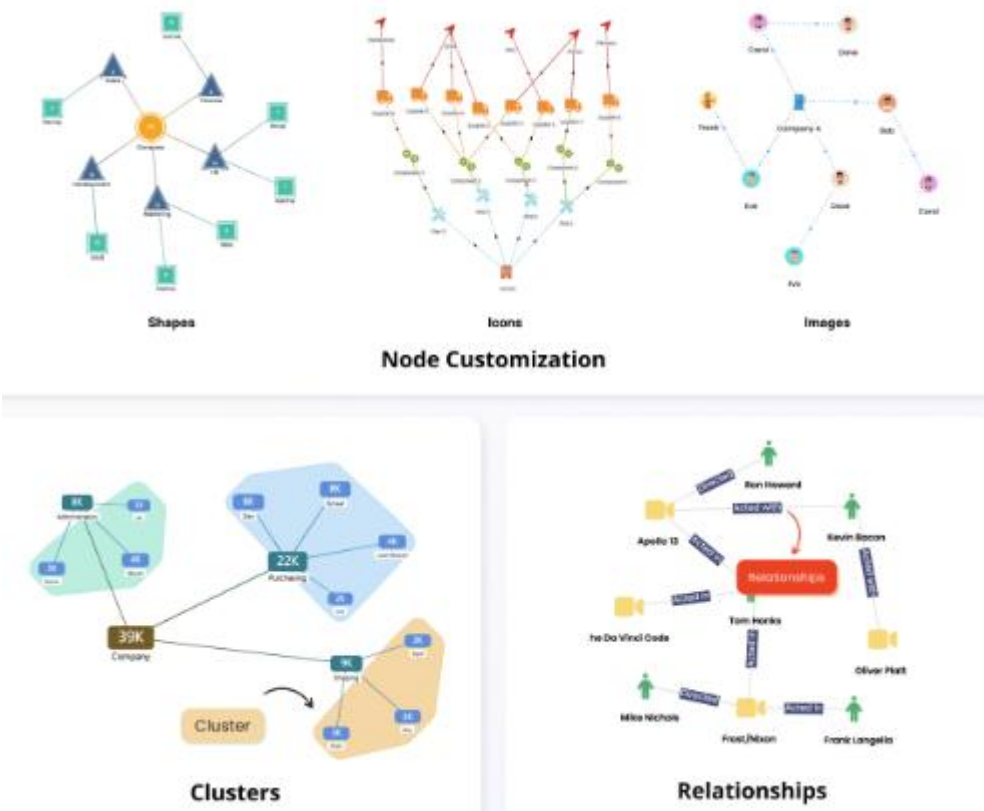

Refresh both schema and data right from the web editing experience.

Simply select '**Refresh**' from the '**Home**' tab while editing your semantic model.
