Announcements

- 📌 Bing maps visual will be removed from the default visuals list of the visualization pane
 - 📌 Update your existing Bing maps visuals to Azure maps visuals
- 📌 Get certified in Microsoft Fabric with 50% off on exams: PL-300, DP-600, DP-700 & DP-900
- 📌 Standalone Copilot to default-on (When Copilot has been turned on in the Tenant settings)
- 📌 Save Explorations to Pro Workspaces (Previously limited to Premium workspaces only)
- 📌 Find PowerBI reports in M365
- 📌 Translytical Task Flows are now enabled by default in Power BI
- 📌 Download PBIX of XMLA altered semantic models

- 📌 *Generally Available:*
 - 📌 *NFC tag support in PowerBI Mobile*
 - 📌 *TMDL View*
 - 📌 *Edit Semantic Models in PowerBI service*

- 📌 **Performance Analyzer available when editing a report in the Web**
- 📌 **Refresh data or schema options in PowerBI Desktop**
- 📌 **Enhanced DAX Intelligence (Preview)**
- 📌 **DAX UDF (User Defined Functions)**

Performance analyzer available in Web

- Performance Analyzer was previously available in PowerBI Desktop only, now available in Web
- This allows you to observe report performance after publishing without the need to go back to PowerBI Desktop
- Another benefit is that you can copy the DAX queries straight from visuals for further troubleshooting or optimisation

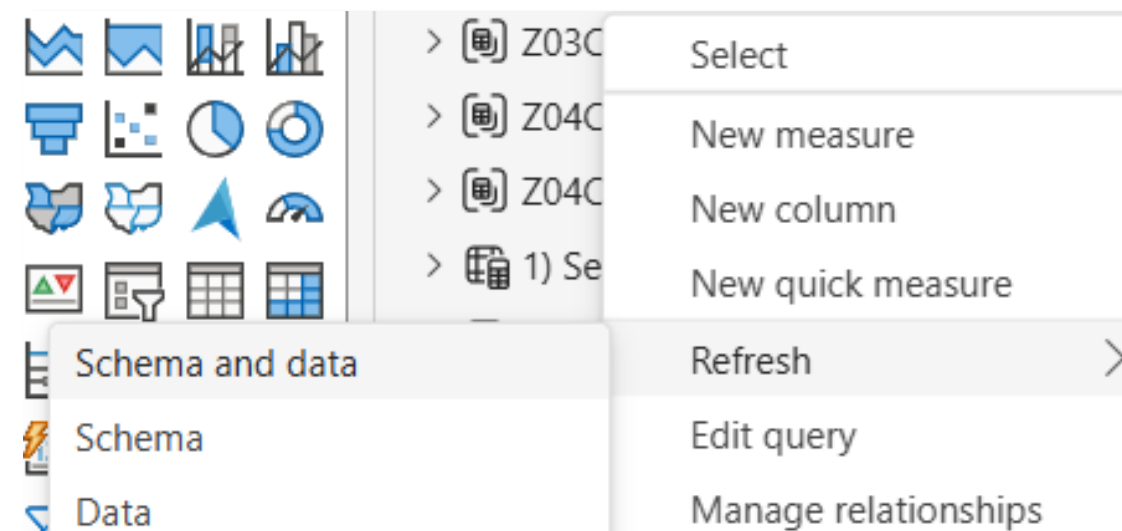

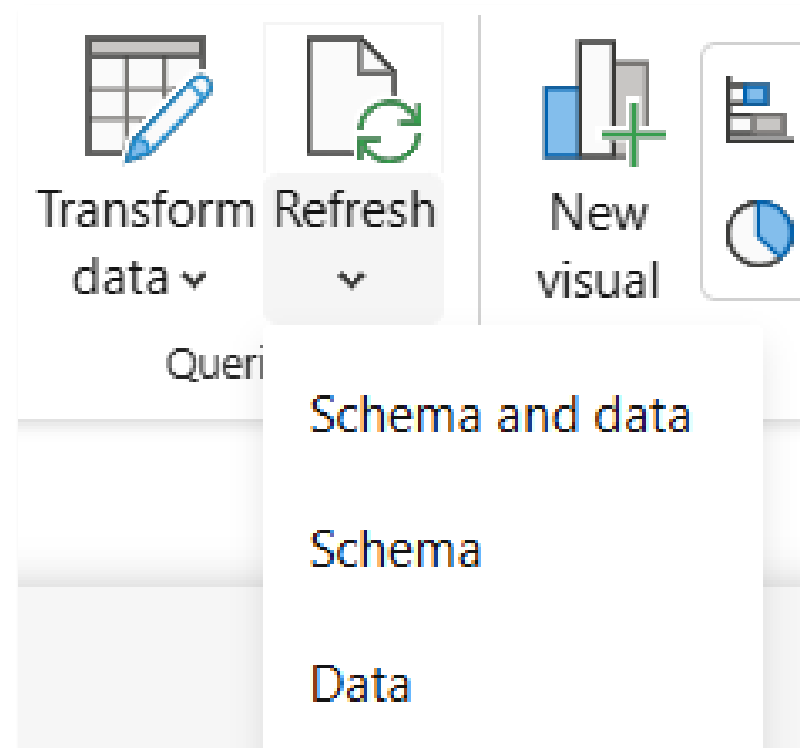

Performance Analyzer Docs

Refresh data or schema options in PowerBI Desktop

- 📌 You now have greater control of the Refresh operation
- 📌 You can choose the refresh operation in either the entire semantic model or on a specific table
- 📌 Schema only: Updates the schema in semantic model only
 - 📌 Column type changes
 - 📌 New columns
- 📌 Data only: Imports new data whilst preserving your current schema in the semantic model

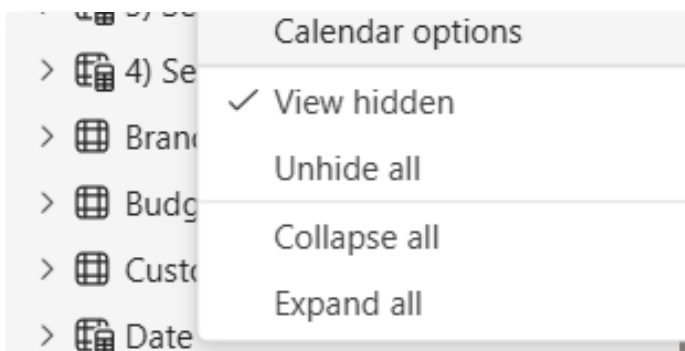

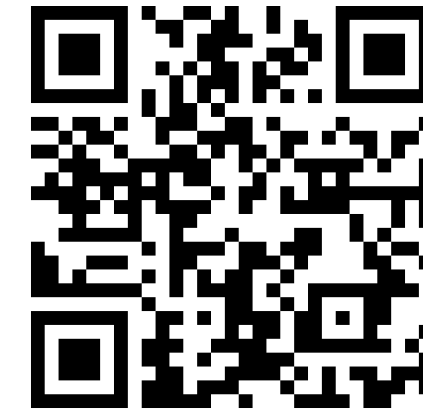

Enhanced Time Intelligence

- 📌 You can now define custom calendars directly in your semantic model
 - 📌 Shifter Gregorian
 - 📌 4-4-5 or 4-5-4
- 📌 Week based calculations are now possible as well
 - 📌 TOTALWTD
 - 📌 PREVIOUSWEEK

Time based Calculations

<https://tinyurl.com/new-calendar-options>

Customize the calendar for Date

For each category you add to the calendar, assign a primary column for time intelligence calculations. Use associated columns to display values in different formats. [Learn more](#)

Calendar name *
4-4-5

[+ Add category](#) [Validate data](#)

Category	Primary column ⓘ	Associated columns ⓘ
Year	Calendar Year (ie 2021)	
Month	Calendar Month # (ie 1)	
Month of Year	Calendar Month Year (ie Jan 21)	Calendar Month (ie Jan)
Week	Calendar Week Number EU (i	Calendar Week Number ISO (

DAX UDF (User Defined Functions)

- 📌 Probably the biggest update in DAX in recent time
- 📌 You can now define custom functions with parameters
 - 📌 Write your required logic once only and reuse it where applicable
 - 📌 Hierarchical functions can be created – a UDF can call another
- 📌 Define DAX UDF either via DAX Query view or TMDL view
- 📌 Semantic models will now be more modular & easier maintainable
